**Terostat IX** is a solvent-free, permanently plastic, self-adhesive sealant (kneading material) based on synthetic rubber. It serves as a good corrosion protection and can be painted with conventional paints based on oil and synthetic resins. The material exhibits very good water and aging resistance. Due to its tackiness the sealant adheres to most surfaces while they are clean and dry and shows excellent compatibility with a variety of substrates.

#### Application areas:

The unshaped kneading material Terostat IX is used in the manufacture of automobiles, railroad coaches and caravans, in the sheet metal processing and refrigerating equipment industry, as well as for construction purposes, such as sealing of openings with cable breakthroughs and sanitary installations.
